

# DATA TRANSFER DIGITAL PRINTING

## Software

CorelDraw up to version 6, Acrobat-PDF-data

We cannot use Word, Excel or PowerPoint!

## Computer system

We work with Microsoft Windows.

Please do not generate Printer files (PS), only open data.

## Structure

The first and most important rule is the size of the data provided.

Always structure data for printing to at least ¼ of the final size (a poster with a size of 100 x 200 cm should be structured in a format of 25 x 50 cm).

Ensure that you use precise measurements.

Please also always provide us with embedded files.

Data in 1:1 ratio not below 72 dpi.

Please enclose a proof.

## Images

Scanned data not below 300 dpi in colour (CMYK) or not below 800 dpi with line scans.

## Graphics, logos, vektor data

Fonts contained in graphics should always be converted into curves or paths.

Please ensure that the colours in graphics, logos etc. are also defined in CMYK.

## Colours

Define all colours in CMYK! (No RGB, Pantone, HKS or CI colours)

All standard printers only work in cyan, magenta, yellow and black (light cyan and light magenta)

## Fonts

PostScript Type 1 (Please ensure that you also provide screen and printer fonts).

NO TrueType fonts!

## Data transfer

Via Fileserver, email, USB stick or DVD

## Computer viruses

The ordering party bears liability for damage caused by any computer viruses imported.
